Simulation & Optimization

INTERNATIONAL CAE POSTER AWARD
A reward to the genius of young researchers
As part of the CAE Conference, a prize has been awarded to the top six innovative ideas in the field of simulation. Amongst the winners, the University of Padua, the Mario Negri Institute and the Politecnico of Milan

LA STAMPA ECONOMIA
"Italia addio, negli Usa si corre"
La fabbrica di piastrelle di Del Conca aperta in 10 mesi. A Rimini aspetta da 10 anni

L'Italia al Mondiale schiaccia con la matematica
La nazionale maschile in Polonia userà elaborazioni realizzate da una società legata al Politecnico di Milano.
«La matematica ci aiuta a ricercare i criteri ideali della prestazione, da adattare ai singoli giocatori» spiega Andrea Brocchi, calciatore, diagrammi. Ciononostante, mille metri di quota e un fresco ancora più nitido in un'estate che non c'è mai stata. namenti open), che si lega al territorio con iniziative a sfondo sociale e che sarà degna di lottare per il titolo solo se supererà cipali manifestazioni. Si legge: l'era, un momento di fine livello fin qui sfuggito alla cattura. La sala pesi (personalizzata) deve

Where's math?

Where's math?

OpenFOAM® for Aerodynamics

- Handling of real complex geometries (full detail production drawings)

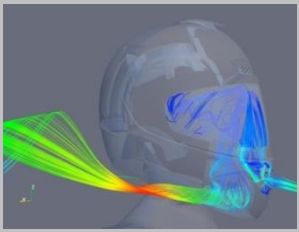

- Mesh criteria definition and **conformity checks** to ensure quality
- Dedicated **simulation workflow** and settings
- The results are input for thermofluid dynamics and vibroacoustics simulations

Multiphysics workflow coupling

AERODYNAMICS wf

3D simulations output to:

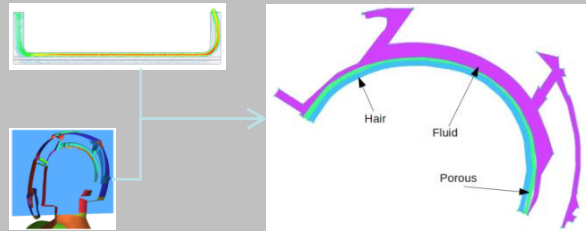

- Real geometry
- Simulation results

Vibro ACOUSTICS wf

Coupling through aerodynamic **pressure**

THERMO-FLUIDO wf

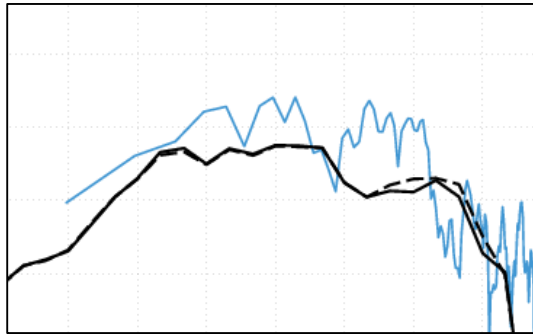

Coupling through ventilation
3D inflow/outflow

- Multiphysics coupling
- Automatic WF interface
- Customer oriented
- User friendly

A "mathematically" comfortable helmet

Vibroacoustic model for noise propagation

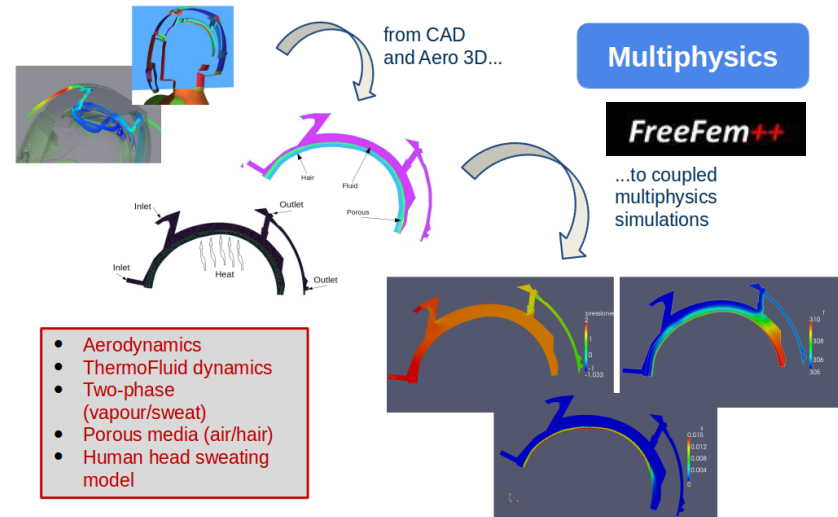

SPEED

*P.F.Antonietti, I.Mazzieri, A.Quarteroni, F.Rapetti:
Non-conforming high order approximation of the
elastodynamics equation, CMAME, 2012*

<http://speed.mox.polimi.it/SPEED/Home.html>

Thermofluid dynamics model for ventilation system

- Aerodynamics
- ThermoFluid dynamics
- Two-phase (vapour/sweat)
- Porous media (air/hair)
- Human head sweating model

*Projects carried out
in collaboration with*

Non-linear structural dynamics model for crash

LS-Dyna

The challenge

Some numbers

Aerodynamics simulations on OpenFOAM®:

- 🔦 \approx **10M** elements per mesh
- 🔦 \approx **200h** (overall) simulation time per helmet
- 🔦 \approx **45** typical configurations per helmet (inclination, speed, style, etc)

| Workflow | Solver | h/sim | Config. |
|-----------------------|------------------|-------|-----------------|
| Thermofluid | Steady/time-dep. | 24 | 25 + parametric |
| Vibroacoustics | Time-dependent | 1500 | 25 |
| Crash | Time-dependent | 60 | 25 |

\approx 50K hours of simulation time per helmet!

Next Step: HPC

The FORTISSIMO project
Factories of the Future Resources, Technology,
Infrastructure and Services
for Simulation and Modelling

MOX-OFF
MATHEMATICS FOR INNOVATION

- ☛ Porting of the platform on a HPC framework
- ☛ Simulation & analyses speed-up
- ☛ Development of a web-based, on-demand SaaS

- ☛ HPC expertise
- ☛ HPC resources

- ☛ Industrial motivation
- ☛ End-User validation

**Enabling Innovative
Products & Services**

OpenFOAM® for glass melting furnaces

🔦 **flameletSimpleFoam**¹

- 🔦 Thermo + fluid dynamics
- 🔦 Combustion (flamelet model)
- 🔦 Steady state

| | |
|------------------------------|----------|
| Mesh size | ≈ 2M hex |
| Processors [#] | 3 |
| Computational time (average) | ≈ 1.5gg |

¹ Developed by Dr. Holzmann and Prof. A. Cuoci from Politecnico di Milano

OpenFOAM[®] for polymerization oven

• buoyantPimpleFoam

- Thermo + fluid dynamics
- Gravity
- Time dependent

Modified to:

• buoyant**Dyn**PimpleFoam

- Moving mesh

| | |
|------------------------------|-------|
| Mesh size | ≈ 3M |
| Processors [#] | 12 |
| Computational time (average) | »14gg |

OpenFOAM® for laser cutting

📍 rhoCentralFoam

- 📍 Gasdynamics
- 📍 Supersonic flow
- 📍 Steady state

| | |
|------------------------------|--------|
| Mesh size | ≈ 5M |
| Processors [#] | 48 |
| Computational time (average) | ≈ 10gg |
